Constellation Viewer

Sometimes it can be cloudy at night, making it hard to view the stars. With this craft you can make your own constellations to view any time of day or night!

You'll need:

- Toilet paper tube
- Foil
- Toothpick
- Rubber band
- Constellation template
- Scissors
- Optional: construction paper, crayons and glue

What to do:

1. Print out and cut out the constellation template.
2. Fold the foil over the end of the toilet paper tube and secure with the rubber band.
3. Place the constellation template over the foil and use the toothpick to carefully poke holes for the "stars."
4. Remove the constellation template.
5. Optional: decorate construction paper and place over the toilet paper tube, covering the excess foil and glue on to secure in place.
6. Hold the open end of the toilet paper tube towards a light source to view your constellation!
