## Flower Features

What are the different parts of a flower? Try dissecting a flower to find out.

### You'll need:

- Flower dissection sheet(s)
- Flower(s)
- Pencil
- Blank paper
- Optional: magnifying glass, tweezers, scissors

### What to do:

1. Explore outside and gather a few different types of flowers. Only pick one or two from each plant so it can stay healthy and have flowers for others to enjoy.
2. Look closely at a flower and then draw it. Can you label the flower's parts on your drawing?
3. Gently take the flower apart. Identify each part and place it in the labeled box on the dissection sheet.
4. Repeat with another flower.
